Desktop Milling Machine

SHAPE YOUR IDEAS

The next evolution in compact milling machines

The SRM-20 is Roland's latest generation desktop milling machine for the office, studio and educational environment. Since pioneering desktop milling in 1986, Roland has continued to perfect our expertise in delivering accuracy and efficiency in a compact format. The SRM-20 incorporates innovative features, including a new spindle, collet, circuit boards and control software. The result is a leap forward in milling precision, speed and ease of use.

The SRM-20 can mill a variety of non-proprietary materials typically used for prototyping, including chemical wood, acrylic and modeling wax. Optional collets are also available to extend the mill's capability with a wide range of end mill shapes and sizes, ideal for creating beautiful finishes and intricate details.

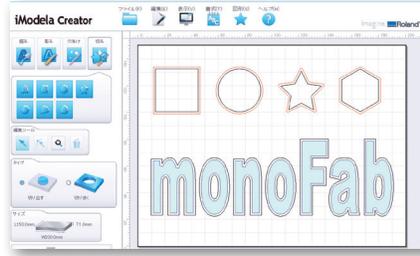

Create functional prototypes from a variety of materials.

Simple operation for optimum results

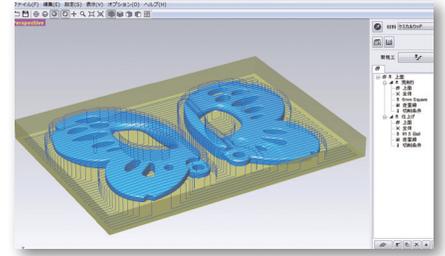

Designed for ease of use, the SRM-20 supports Roland's unique "VPanel," an on-screen operation panel for the computer. By using the speed-controlled 4-way cursor movement, the origin point can be set quickly and accurately. Spindle RPM and milling speed can be altered during milling, allowing full control over the results and milling time.

3 types of software included for ease of use, even for beginners

"MODELA Player 4" is a CAM (Computer Aided Manufacturing) software that automatically calculates and displays the cutting tool path from your 3D design file. All software can be used individually as needed.

iMODELA™ Creator is software for processing 2D data such as text and graphics.

ClickMILL™ is a simple milling solution for surfacing, drilling holes and pocketing without using 3D CAD (Computer Aided Design) software.
